Figure S1 – Uncertainty values associated to Chl-a (top row) and SST (bottom row) for three moments of analysis of all TCs (before, during, and after) and a random sample from the dataset. Do note the much larger scales of uncertainty for Chl-a; the SST is presented in Kelvin, as it is the unit from which the associated uncertainty is computed.
Figure S2 – Mean modulus of wind stress for (a) each day when Ophelia occurred, and (b) each 6-hour observation from Ophelia. Colours in (a) correspond to those in Figs. 6a and 6b while the markers in (b) correspond to those in Fig. 6a, round markers indicate observations outside the study region. Colours in (b) correspond to the intensity of that 6-hour observation.
