Received and published: 11 September 2014

It has come to my attention that the seismic section, of which S01 in figure 3 is a part, has been published previously. Tang and Zheng (2011) is cited but before that it appeared in figure 3 of Song et al. (2009) “Seismic images of ocean meso-scale eddies and internal waves”, Chinese Journal of Geophysics, 52(6), 1251-1257. Moreover undulations of reflectors in the 2009 publication are attributed to internal waves.

As a matter of professional propriety and courtesy, the earliest known publication of the section and expression of ideas about internal waves therein need to be cited / acknowledged in this submission to Ocean Science.
