

After reviewing the revised manuscript I came to the conclusion that the authors addressed all my previous points and that I support publication of the paper without the need of further revisions. I recommend some language editing & technical revisions, if required.

Please note that the report "os-2015-99-author\_response-version1" is incomplete (most replies to referee #2) are missing) on the Revised Submission page. I almost rejected the paper because of this. Luckily, I found detailed author replies somewhere else on the Webpage.
