I have seen your recommendation which is fine for the first part of the process. However, I need a more detailed review now that paper is in OS discussions. For example a critique of the paper: the strengths of the paper and any way the paper can be improved to make it communicate with a world wide audience of physical oceanographers working in shelf seas. If you are unable to provide the more detailed review I would appreciate a recommendation of other reviewers from you,

Regards,

Dr Neil C Wells
