

Interactive comment on “Optical tools for ocean monitoring and research” by C. Moore et al.

C. Moore et al.

Received and published: 23 October 2009

The authors thank the editor for his comments and will defer broader review of imagery to Jonsen et al. We also appreciate the potential use of refractometry and did discuss the topic indirectly when referring to SPR techniques. As the editor is aware the topic of "Optics" is of very broad scope, and from the beginning, the authors faced considerable challenges in limiting this scope. As a consequence we have undoubtedly missed some important real and potential contributions.
