

Interactive comment on “A review of the role of submarine canyons in deep-ocean exchange with the shelf” by S. E. Allen and X. Durrieu de Madron

Anonymous Referee #1

Received and published: 17 July 2009

This is a wonderfully written review of the roles of canyons in deep-ocean exchange with the shelf. This paper needs no revision whatsoever. Indeed, its clarity is such that it could very easily form the basis for a textbook or lecture notes on the subject. I recommend immediate acceptance and publication.
