Received and published: 7 October 2010

At this point we have one recommendation for minor revision (referee #2) and one for major revision (referee #1). With referee #1 declining to consider a revised manuscript I feel that it's unwise to ask the authors to respond at this point to the request for major revision. Accordingly, although this may lengthen the review process, I've requested a third review of the original submission before the authors will be asked to respond.
