As Handling Topic Editor for os-2010-56 ‘On the freshening of the northwestern Weddell Sea continental shelf’ by H. H. Hellmer, O. Huhn, D. Gomis, and R. Timmermann, I find that the authors have comprehensively responded to the reviews, indicating important revisions to the original manuscript have been made. I congratulate the authors on their effort in completing this in a timely manner and would encourage them to now submit the revised version of the manuscript as soon as possible.
