1)In the title "Black Sea" should start with capital letters (as in the name of the manuscript); 2)On the last figure the titles of axis must be interchanged(Altimetry mean velocity should be at the bottom axis and drifters buoys velocity on the right side of the picture)/ This is important as altimetry Euler velocities usually underestimate Lagrangian drifters velocities/ Sorry, this is an unfortunate misprint. I attach corrected figure in this comment.

Interactive comment on Ocean Sci. Discuss., 8, 701, 2011.

Fig. 1. Fig. 8. Scattergram of mean amplitudes of drifting buoys and altimetric velocities, reconstructed using SMDT and CMDT.
