Dear Professor Your useful comments and helpful guidelines on our manuscript in Ocean Science Discussion are appreciated. - As you suggest, structures of seawater properties such as temperature and salinity will describe in the manuscript. -The discussion on concentrations (high or low) of chlorophyll and damaging to the marine environment will re-prepare. - The unit of salinity in PSU will add. - Some advance on methodology, using CTD probe and methods of chlorophyll measurements will make in the manuscript. - The form of the results section is change to describe each transect independently. - To improve the quality of figures we will interpolate the contours levels

C252

to smooth lines. Finally, we would like to thank you for your help us to improve the quality of the manuscript.
