Comment: Dear Authors, two referees comments have been posted on your manuscript. Both referees agree on the scientific relevance of your manuscript, however they provide a detailed list of suggestions/recommendations which I strongly encourage you take in consideration during the preparation of the revised version of the manuscript. Furthermore, referee#1 has pointed out several problems with the English, which should be substantially improved. I consider this comment as important as the scientific ones, please make an effort to improve the language and avoid grammar errors.

Response: Dear Paolo Oddo, thank You for your comment. We answered all the comments and corrected our article according to them.

We should kindly ask You to pay attention when writing the title of our article. It should be written with capital letters for Black Sea and Mean Dynamic Topography like this “Mean Dynamic Topography of the Black Sea, computed from altimetry, drifters measurements and hydrology data”. In the submitted manuscript all letters of title are capital.

Sincerely yours, A. A. Kubryakov and S.V. Stanichny.
