Received and published: 15 August 2011

We appreciate the thoughtful comments made by E.A. Vsemirnova. The following comments reflect our responses to those comments.

1. Fig 7 has been revised with an inset that shows the level of agreement with finer resolution. This inset greatly improves the resolution. We are grateful to the reviewer for this suggestion. The modified figure will be included in the revised manuscript.
2. The sentence in question has been re-written to state, “The level of agreement is encourages the utilization of the present predictions which are based on numerical simulation.” The modified text will be included in the revised manuscript.
