Paragraph #5 in the reply to D. Snyder has the following:

"Frequency- vs time-domain measurements are also moot, as in modern IP systems the frequency-domain signal is Fourier transformed to provide phase-shift and amplitude as a function of frequency."

This instead should read:

"Frequency- vs time-domain measurements are also moot, as in modern IP systems the TIME-domain signal is Fourier transformed to provide phase-shift and amplitude as

C1030

a function of frequency."
