Response letter to Editor and Anonymous Reviewer of the article entitled REVISTING TROPICAL INSTABILITY WAVE VARIABILITY IN THE ATLANTIC OCEAN USING SODA REANALYSIS, Ocean Science Discussion, ref. paper #os-2016-84.

Dear Editorial Board,

We would like to thank you for considering our manuscript entitled: 'REVISITING TROPICAL INSTABILITY WARE VARIABILITY IN THE ATLANTIC OCEAN USING SODA REANALYSIS', for publication in Ocean Science. Please, find in the following our detailed response to the comments and suggestions of Reviewers, point by point.

The most important change in this version was the modification of figures 2, 9 and 11. This change was a recommendation made by Reviewer #2, which we agreed that would improve the comprehension of the discussion in the text. Minor changes were made in the introduction.

We are very glad with the revision process of Ocean Science and we thank you for this opportunity!

Please, find attached the letter for the Reviewers.

All of our best, The authors.

Revisiting Tropical Instability Wave Variability in the Atlantic Ocean using SODA reanalysis

1 Introduction

- A Tropical Instability Wave (TIW) is defined as a cusp-shaped oscillation of the equatorial 30 thermal front that propagates westward. These waves are associated with the seasonal variability of the equatorial current system, and they are observed when the cold tongue (Figure 1) is well established (Chelton et al., 2000; Jochum et al., 2004a, Legeckis and Reverdin, 1987; Philander et al., 1986; Steger and Carton, 1991; Weisberg and Horigan, 1981). These westward waves have wavelengths ranging from 600 km to 2600 km and periods varying between 15 and 37 days in the Atlantic Ocean (Caltabiano
- 35 et al., 2005; Chelton et al., 2000; Düing et al., 1975; Jochum et al., 2004b; Legeckis and Reverdin, 1987; Pezzi and Richards, 2003; Weisberg, 1984), and Athie and Marin (Athie and Marin, 2008) describes a wider range (periods of 15- 50 days). The formation process is the naturally generated instability of the equatorial zonal current system with alternating bands of eastward and westward flows
