Received and published: 7 July 2017

we thank both referees for their helpful comments which we will address in detail at the end of the discussion period. Prior to this, we have a question to referee #1 concerning the technical correction on page 4 line 3: Change 'whole area' with 'northern part of the area' as it is mentioned that it occurred above 39.6°N (Ribotti et al., 2014). In the abstract as well as on page 359 and 361 of this paper it is written that the salinity inversion occurred over the whole sampling field. Taking a quick look at MedGOOS3 CTD data we saw salinity inversions also south of 39.6°N. What makes you think it occurred only north of it?
