

***Interactive comment on “Storm-induced water dynamics and thermohaline structure at the tidewater Flade Isblink Glacier outlet to the Wandel Sea (NE Greenland)” by Sergei Kirillov et al.***

**Anonymous Referee #2**

Received and published: 28 September 2017

I find the manuscript mostly clear and with interesting results. I have only one request; the color coding of DOY (Day Of Year) in Figure 6c is not visualizing the spikes in temperature very well. It would be nice if the author could change that, perhaps emphasize the A and B storm events. This goes for the inserts in Figure 7 as well.
