

Interactive comment on “The density–salinity relation of standard seawater” by Hannes Schmidt et al.

Anonymous Referee #2

Received and published: 6 October 2017

I regret that the explanations on the calibration of the instrument to the air density doesn't be integrated in the paper, but if a hint is added in the publication and that the digital supplement is easily accessible, I am satisfied.

Response to the specific comments of the authors: Question 1 : Are the explanation of the uncertainty budget in our previous publication referred to? Yes. The explanations given in the following of the response are sufficient to clear up the doubts I had on the values given in the document.

I close the discussion and I accept the publication of the paper.
