

Interactive comment on “Synoptic scale variability of surface winds and expected changes in the ocean–atmosphere dynamics of the eastern Austral Pacific Ocean” by Iván Pérez-Santos et al.

Pérez-Santos

ivan.perez@ulagos.cl

Received and published: 15 January 2019

We thank the reviewer for pointing out all comments, especially the reference to use the ERA-5 product to carried out EOF analysis and the other analysis in the manuscript, e.g., Ekman transport and Ekman pumping. We have started the work with this dataset, but download the data and run all programs to build new figures will take at least one month to the data processing. When we finish with this process, we will submit the new version of the manuscript, including the RC1 comments.
