

Interactive comment on “A revised ocean glider concept to realize Stommel’s vision and supplement Argo floats” by Erik M. Bruvik et al.

Anonymous Referee #1

Received and published: 17 May 2019

Dear Editor,

This is a bit of an unusual manuscript. It is not very scientific in the traditional sense, but interesting nonetheless. It makes it a bit difficult to rate the questions 1) and 2) above appropriately. I attach a pdf with detailed comments and issues. Interesting as it looks, I am not really convinced if it would work out. I realize that it may be not straight forward to alleviate my concerns. In spite of this I would not wish to mark it as "reconsider after major revisions" and I hope it will start a discussion on this matter.

Please also note the supplement to this comment:
