Received and published: 11 February 2021

Dear Authors

You will have seen serious critical comments by three referees, relating to the description of what you have done and relevance to the ocean. One recommends rejection and the other two major revision; I would expect to send it back to at least two for re-review after revision. Therefore you will need to address these comments and include corresponding improvements in a revised manuscript before progress towards publication.

Yours sincerely

John Huthnance (editor)
