

Interactive comment on “Impact of naval traffic on the sediment transport of the Port of Genoa – a modelling study” by Antonio Guarnieri et al.

Anonymous Referee #2

Received and published: 27 October 2020

My comments are directly submitted in the revised manuscript as PDF comments (supplement material). I really liked the paper, the methods and the global scope. I have, however, some minor comments and questions regarding the writing of the paper and a major comment related to the initial boundary conditions (bathymetry) of the numerical simulations.

Please also note the supplement to this comment:
