

In response to the last round of review by referee2 and the editorial decision letter we've extended the range of ε in panel (a) of Figure 4 to include the range well below $1 \cdot 10^{-3}$ and the panel now cover the range of between $0.6 \cdot 10^{-3}$ and $5 \cdot 10^{-3}$.

Corresponding changes were also made in the text (line 207) and in the caption of Figure 4.
